i2k Connect®

Turn Document and Data Chaos into Profit-building Actionable Intelligence

Improve decision-making, reduce operational risk, and cut data-handling costs with i2k Connect.

Transform massive volumes of unorganized data into easily understood information.
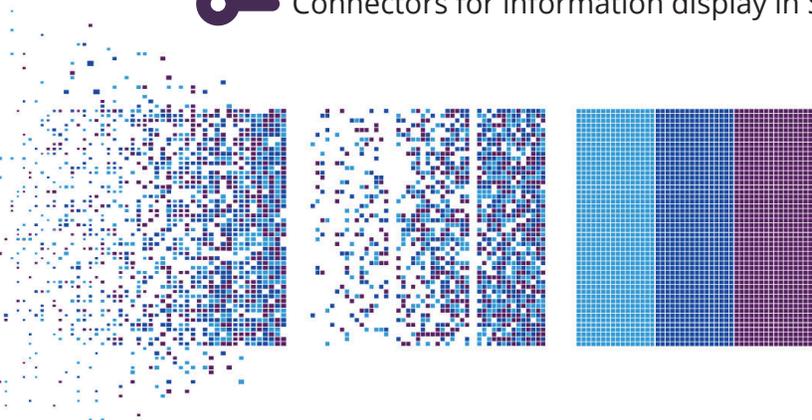

Inspire decisions you can't get from "opaque" Artificial Intelligence (AI) tools.

Make a business case in 30 days.

Built on domain-tuned AI, natural language processing (NLP), and machine learning (ML), the i2k AI Platform automatically applies accurate metadata and classification using industry-specific taxonomies. It adapts quickly to your company's content—across any data structure, platform, or API—delivering faster insights and higher ROI. Deploy i2k anywhere—Microsoft Azure, Google Cloud, AWS, Kubernetes, private cloud, or on-premise.
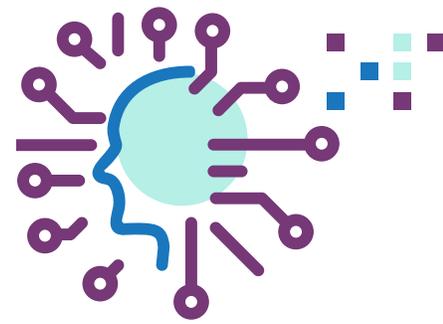

i2k Connect products

- AI-petabyte scalable content discovery, processing, and indexing of documents and data across file shares, cloud storage, and disparate applications
- AI-chat enabled search, advanced filters, and document visualization available via browser-based portal or API
- Connectors for information display in SharePoint, ArcGIS, Geodatafy, OSDU, and others

Developed by teams with deep industry expertise, the i2k AI Platform reveals critical information.

Benefits

- Transforms unstructured content and data into revenue-driving intelligence.
- Reduces risk and operational inefficiency by uncovering hidden data relationships.
- Delivers measurable cost savings—no manual re-tagging required.
- Improves profit margins with safer operations and better-informed decisions.
- Accelerates time-to-value with robust pre-built industry taxonomies and client-specific customization.

Compare the capabilities of the i2k AI Platform to other industry AI offerings.

Capabilities	i2k AI Platform	ChatGPT	Microsoft Copilot
Prebuilt domain taxonomies tuned for multiple industries	✓	✗	✗
AI enrichment at petabyte scale across silos and systems	✓	✗	✗
Classifies documents into prebuilt domain taxonomies	✓	✗	✗
Answer questions from entire collection of documents and data	✓	✗	✗
Find information via search, filters, and previews with visual analysis	✓	✗	✗
Process data in situ without copying or moving	✓	✗	✗
Deploy to cloud or secure on-premises environments	✓	✗	✗
Identify redundant, outdated, license-expired docs	✓	✗	✗
Supports all common LLMs	✓	✗	✗
